DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-12, drawn to a composition of attenuated vaccinia virus, classified in class 424, subclass 232.1.
 - II. Claim 13, drawn to a method of preventing variola virus, classified in class 424, subclass 232.1.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product. See MPEP § 806.05(h). In the instant case, Invention I can be used as a vector for producing heterologous proteins.

2. No matter which group is elected, a further restriction is required. Since the decisions in *In re Weber*, 580 F.2d 455, 198 USPQ 328 (CCPA 1978) and *In re Haas*, 580 F.2d 461, 198 USPQ 334 (CCPA 1978), it is improper for the Office to refuse to examine that which applicants regard as their invention, unless the subject matter in a claim lacks unity of invention. *In re Harnisch*, 631 F.2d 716, 206 USPQ 300 (CCPA 1980); and *Ex parte Hozumi*, 3 USPQ2d 1059 (Bd. Pat. App. & Int. 1984). **Broadly, unity of invention exists where compounds included within a Markush group (1) share a common utility, and (2) share a substantial structural feature essential to that utility.**

Art Unit: 1648

Applicants are required to elect one peptide sequence for examination. This is not an election of species because the sequences recited in claim 7 lack unity of invention and so do not constitute a proper Markush group. Specifically, the sequences do not share a substantial structural feature essential to the asserted utility. Review of SEQ ID Nos: 3-471 (odd numbers) shows that there is no substantial shared structural feature present in fragments. Therefore each peptide and peptide-encoding nucleotide fragment is considered a patentably distinct invention and clonal strains of attenuated vaccinia virus defined by hybridization to them are patentably distinct.

Claim 7 links the inventions of group I and claim 13 links the inventions of group II. The restriction requirement among the linked inventions is **subject to** the nonallowance of the linking claim, claim 7. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claims depending from or otherwise requiring all the limitations of the allowable linking claims will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312. Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking

Art Unit: 1648

claim, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.
